

## Continu VaulT Small Business

### Automated Online Backup

In today's business environment, data volumes are growing at an explosive rate. As information is the lifeblood of today's business, its protection is crucial. Continu VaulT online backup is the easiest and surest way to protect your data. Continu VaulT eliminates common problems associated with traditional tape backup methods such as human error and media failure, ensuring that your data is recoverable when you need it. In addition, costs associated with labor, hardware, tape transport, and storage are reduced or completely eliminated.

### Features

Our enterprise solution has all of the features of our standard Continu VaulT service with the following additional capabilities to meet enterprise needs:

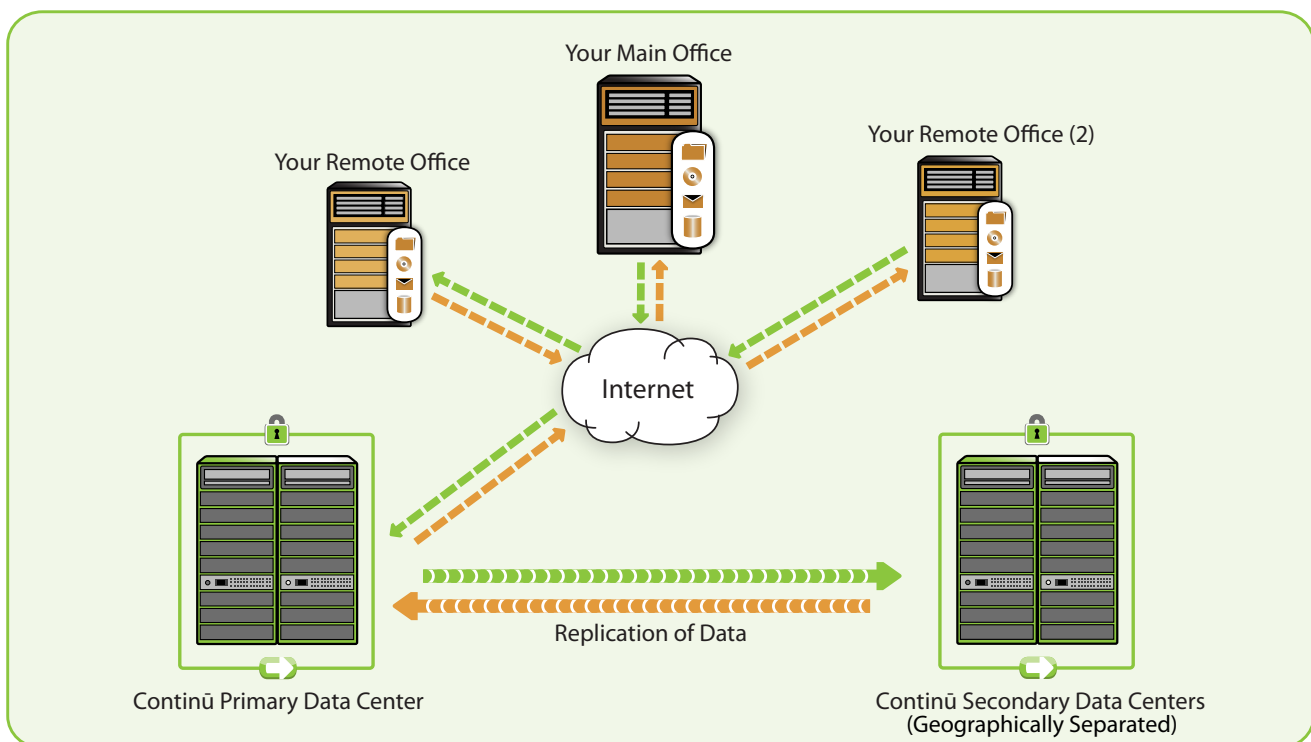

- Automatically moves data off-site to a secure data center
- Data is secure via military strength encryption in both transport and storage
- Protect data on servers, workstations, and laptops
- Removes the costs, hassles and human error associated with tape backup

### The Problem with Tape

Continu VaulT eliminates common problems associated with traditional tape backup methods such as human error and media reliability, ensuring that your data is recoverable when you need it. In addition, costs associated with labor, hardware, tape transport, and storage are reduced or completely eliminated. Tape systems once-a-day backups and offsite retrieval logistics can cause loss of productivity and missed deadlines in the event of a data corruption, virus or other disaster. Lack of adequate IT staff can also result in inconsistent backup procedures and failed data recovery.

### How It Works

Continu VaulT automated online backup electronically encrypts and compresses your data and then transfers it to our state-of-the-art data center. After the first full backup, only net new changes are sent, optimizing transfer time, bandwidth, and storage space. Continu VaulT software is installed on each server, desktop, or laptop you wish to protect. Once configured, your backups happen automatically, securely transferring and storing your critical data. For additional protection, you may choose to have your data replicated to a second data center. You choose how you want to scale and implement the service.

## Service Highlights

Highlight	Highlight Benefit
Personal Support	You are not alone. We work closely with you to install and support your business data protection solution
Automated, disk-to-disk process	There are no tapes to manage, so you save time and virtually eliminate errors. Your backups are stored on disk, safely offsite.
Secure	End-to-end military-grade encryption during transport and storage ensures the confidentiality of your information
Reliable	Disk-to-disk redundant arrays in state-of-the-art data centers with optional replication to a second data center
Intuitive Interface	Intuitive web browser-based user interface makes establishing and modifying backups easy for Administrators and end users. Restoring your data happens just as easily.
Time Savings	Automated process requiring significantly less manual intervention and administration, often the most significant cost associated with tape systems
Cost Savings	Decreased labor costs and elimination of hardware, media, and transportation costs
No Capital Investment	Monthly service requires no upfront hardware, software or tape media investments
Comprehensive	One solution for all forms of business application data, including files, databases, email, email servers, etc.
Rapid File Restore	Rapid and reliable recovery from disk (instead of relying on tape) keeps your business investments more productive
