

Continu VaulT Enterprise

Automated Enterprise Online Backup

Reliable backup and recovery are critical to today's information-driven organizations. Continu VaulT Enterprise enterprise online backup offers the most comprehensive and proven data protection solution that radically simplifies the protection of all your company's servers with reliable, automated backup and recovery.

Advanced Enterprise Features

Our enterprise solution has all of the features of our standard Continu VaulT service with the following additional capabilities to meet enterprise needs:

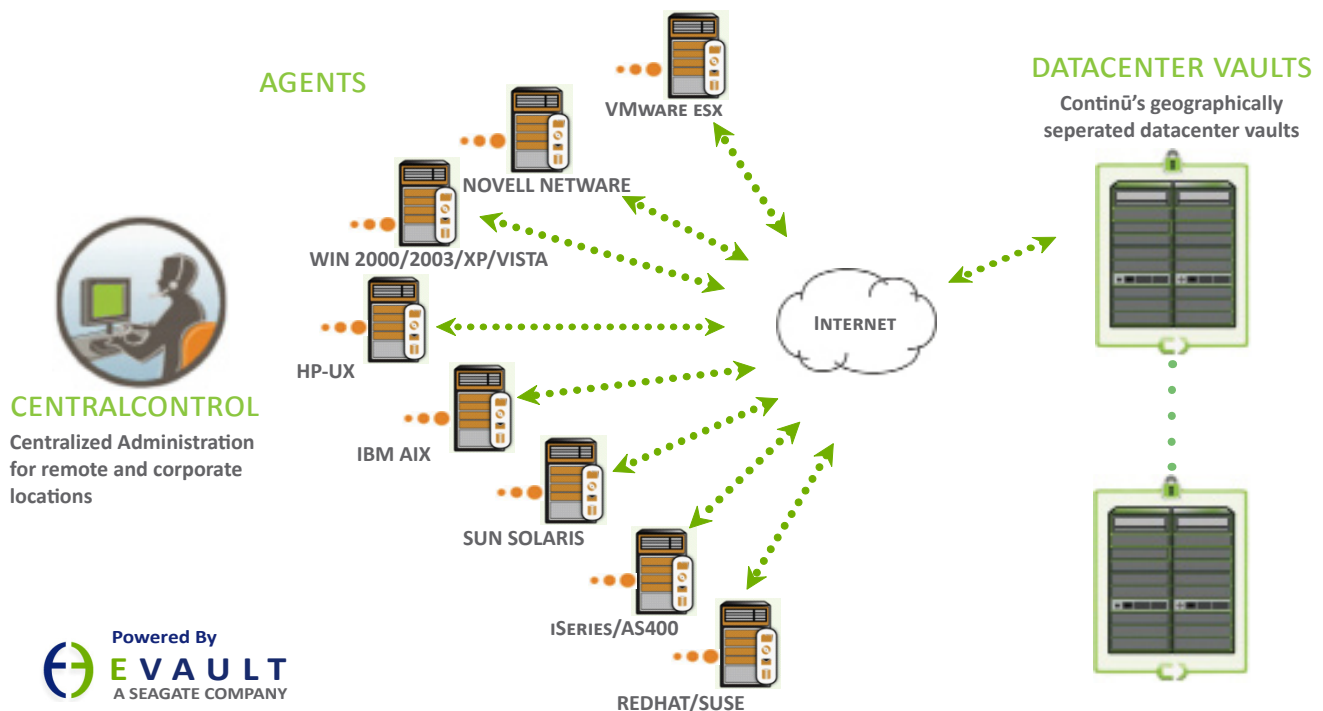

- Advanced retention and scheduling capabilities
- Longer retention capabilities
- Enterprise level compatibility (both physical and virtual environments)
- Additional web-based management capabilities
- Bandwidth throttling - Minimizes impact on other applications during backup window to maintain quality of service.
- Leading enterprise technology - Since 1997, Evault has provided reliable backup and recovery to more than 20,000 businesses.

The Problem with Tape

Continu VaulT eliminates common problems associated with traditional tape backup methods such as human error and media reliability, ensuring that your data is recoverable when you need it. In addition, costs associated with labor, hardware, tape transport, and storage are reduced or completely eliminated. Tape systems once-a-day backups and offsite retrieval logistics can cause loss of productivity and missed deadlines in the event of a data corruption, virus or other disaster. Lack of adequate IT staff can also result in inconsistent backup procedures and failed data recovery.

How It Works

Continu VaulT automated online backup electronically encrypts and compresses your data and then transfers it to proven disk systems in our state-of-the-art data centers. After the first full backup, only net new changes are sent, optimizing transfer time, bandwidth, and storage space. Our solution radically simplifies the protection of all your company's servers with reliable, automated backup and rapid recovery.

Service Highlights

Highlight	Highlight Benefit
Personal Support	You are not alone. We work closely with you to install and support your business data protection solution
Automated, disk-to-disk process	There are no tapes to manage, so you save time and virtually eliminate errors. Your backups are stored on disk, safely offsite.
Secure	End-to-end military-grade encryption during transport and storage ensures the confidentiality of your information
Reliable	Disk-to-disk redundant arrays in state-of-the-art data centers with optional replication to a second data center
Intuitive Interface	Intuitive web browser-based user interface makes establishing and modifying backups easy for Administrators and end users. Restoring your data happens just as easily.
Time Savings	Automated process requiring significantly less manual intervention and administration, often the most significant cost associated with tape systems
Cost Savings	Decreased labor costs and elimination of hardware, media, and transportation costs
No Capital Investment	Monthly service requires no upfront hardware, software or tape media investments
Comprehensive	One solution for all forms of business application data, including files, databases, email, email servers, etc.
Rapid File Restore	Rapid and reliable recovery from disk (instead of relying on tape) keeps your business investments more productive
