

Continu Vault Enterprise XA

Backup Onsite Storage and Offsite Replication

Continu Data Services' hardware-based solution provides an onsite appliance and offsite replication and disaster recovery utilizing Data Domain's industry-leading deduplication technology. To the customer's network and existing backup infrastructure, the onsite appliance simply looks like disk storage or a tape device. Once the source appliance is installed, the only change to a customer's backup infrastructure is to redirect their current backup jobs to the appliance.

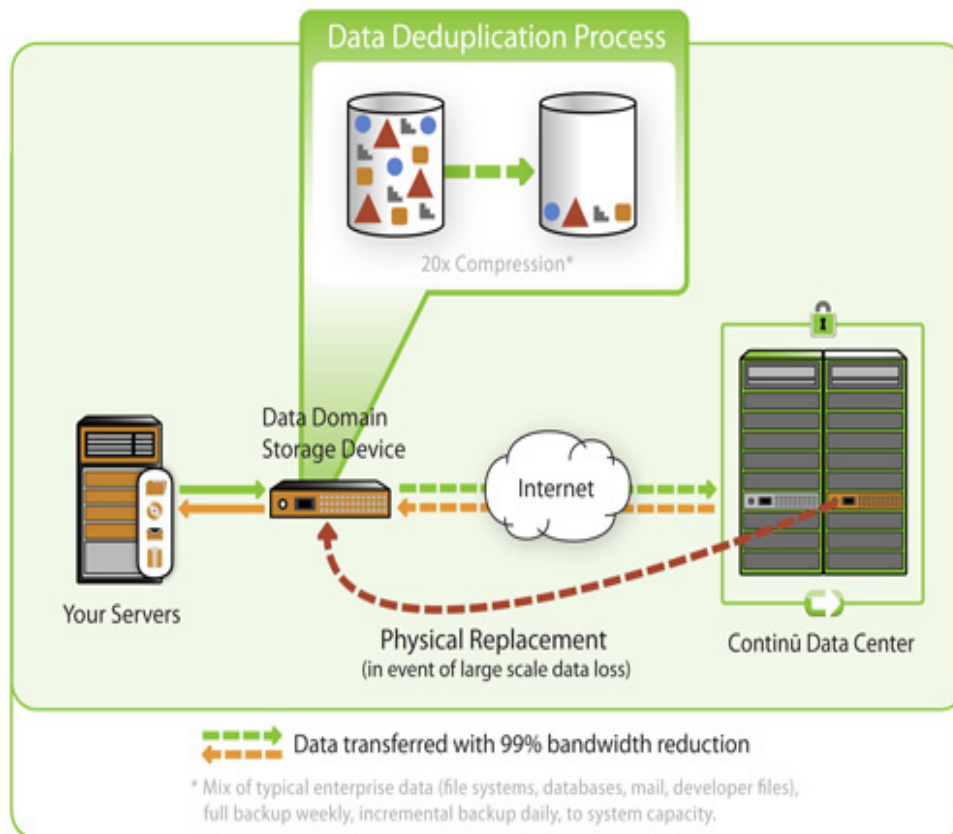

The Problem with Tape

Continu Vault eliminates common problems associated with traditional tape backup methods such as human error and media reliability, ensuring that your data is recoverable when you need it. In addition, costs associated with labor, hardware, tape transport, and storage are reduced or completely eliminated. Tape systems once-a-day backups and offsite retrieval logistics can cause loss of productivity and missed deadlines in the event of a data corruption, virus or other disaster. Lack of adequate IT staff can also result in inconsistent backup procedures and failed data recovery.

How It Works

A small Data Domain compression and storage appliance is plugged into your existing network and backup environment. As your backup data is streamed through the device, one hundred gigabytes of your data is rapidly compressed into a staggeringly small five gigabytes, storing your backup internally, and then automatically replicating it over the Internet to a twin device in Continu's secure data centers.

That 20x compression*, a tenfold increase over the industry standard, means we can store, replicate, and protect more of your data—more efficiently—than any other solution. And in the event of a large-scale disaster that prevents you from recovering your data from your on-site Data Domain device, we can quickly stream your data onto a spare device and physically deliver it to get your data assets restored in record time.

Service Highlights

Highlight	Highlight Benefit
Industry-Leading Technology	Data Domain's Global Compression™ deduplication and 20x compression technology.*
Onsite Backup Storage	Highly efficient deduplication technology radically changes disk-based backup economics.
Offsite Backup Replication	Automatic secure transfer of compressed data over the wide area network (WAN) with 99% bandwidth reduction.
Configure and Forget	Easy integration with existing infrastructure; once configured the process is completely automated.
Time Savings	Automated process requiring significantly less manual intervention and administration.
Cost Savings	Requires significantly less administration. Completely removes tape media, transportation, and storage costs.
No Capitol Investment	Monthly service requires no upfront hardware or software investments
Comprehensive	One solution for all forms of business application data, including files, databases, email, email servers, etc.
Rapid File Restore	Rapid and reliable recovery from disk (instead of relying on tape) keeps your business investments more productive
